In this report I will be showing you how to Rank in Google for more Keywords, Increase Targeted Traffic and Boost Website Exposure.

This technique uses the power of Fresh & Relevant content along with the power of internal links that you control.

Important note on Technique

As a user performing a search in Google, you expect to find up to date & relevant results.

Google understands this and they try their best to give users what they want. They don't want to show out of date stale content.
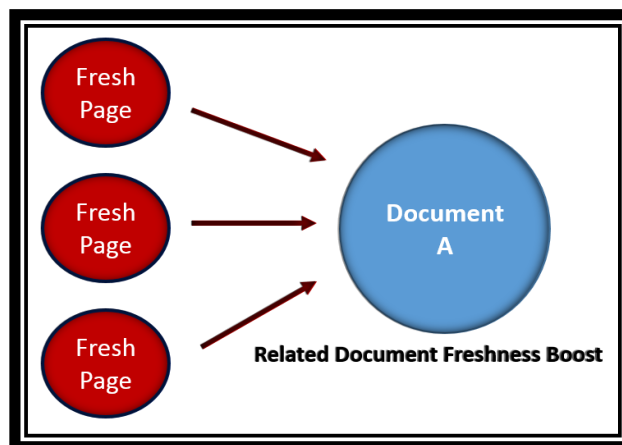

As a result, Google provides every document on the net with a freshness score. This freshness score can play a large role in how and where your site ranks in Google.

There are several ways in which Google determines a documents freshness score - one of which is known as **Related Document Freshness**.

This is when Google determines parts of a documents freshness by assessing the freshness of the documents that are linking to it.

So by building links from fresh documents you're able to get a boost in freshness score. You're also able to benefit from internal links - a proven SEO strategy for increasing your Search Engine Rankings.

This means that documents linking to Document A will influence the freshness score of Document A.

They also pass Link Juice, send Traffic, Reassure the documents Content Theme & Vouch for document A

Adding new content to your site on a frequent basis is important.

By creating new content, you're able to:

- Target & Rank for more keywords
- Increase your Freshness Scores
- Create internal links and diversify anchor text
- Show Google you're the authority in your niche

But adding content on a frequent basis is difficult especially if you have many websites.
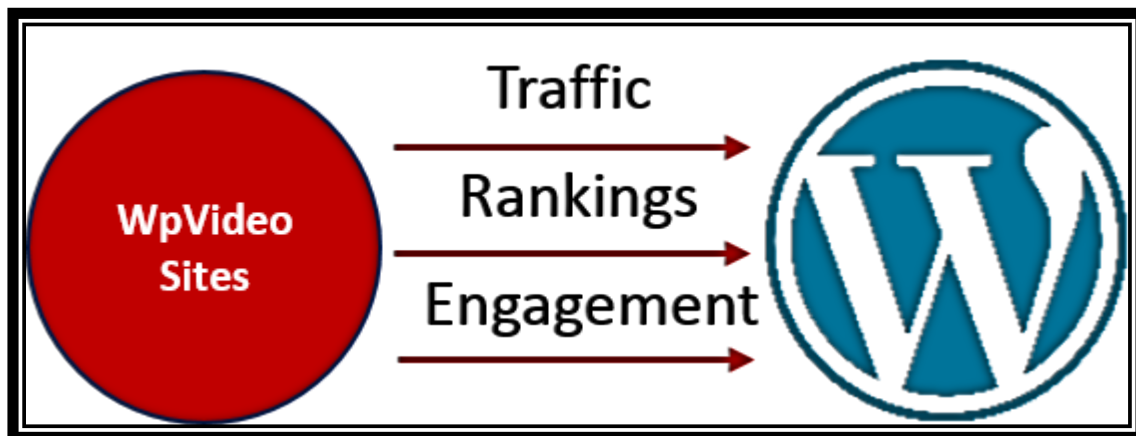

The WpVideoSites Method

When we set out to create WpVideoSites, we knew what we wanted overall but it's actually turned out to be so much more.

We wanted a plugin that

- Could be installed on ANY WordPress site
- Would not affect the way our main sites looked or felt to our users
- Would allow us to boost freshness scores & internal links.

And most importantly we wanted something that was safe, built quality pages and that was easy to use.

**The ultimate goal was to Increase Traffic, Rankings & Engagement for our main content**

The WpVideoSites Method Explained

WpVideoSItes is a WordPress plugin that allows you to create Independent Video Sites that run alongside your current blog.

The Video sites are designed to Send Targeted Traffic, Increase Engagement and Boost the Search Engine Rankings for your main WordPress site.

It looks beautiful, adds great content, and works with ANY Niche.
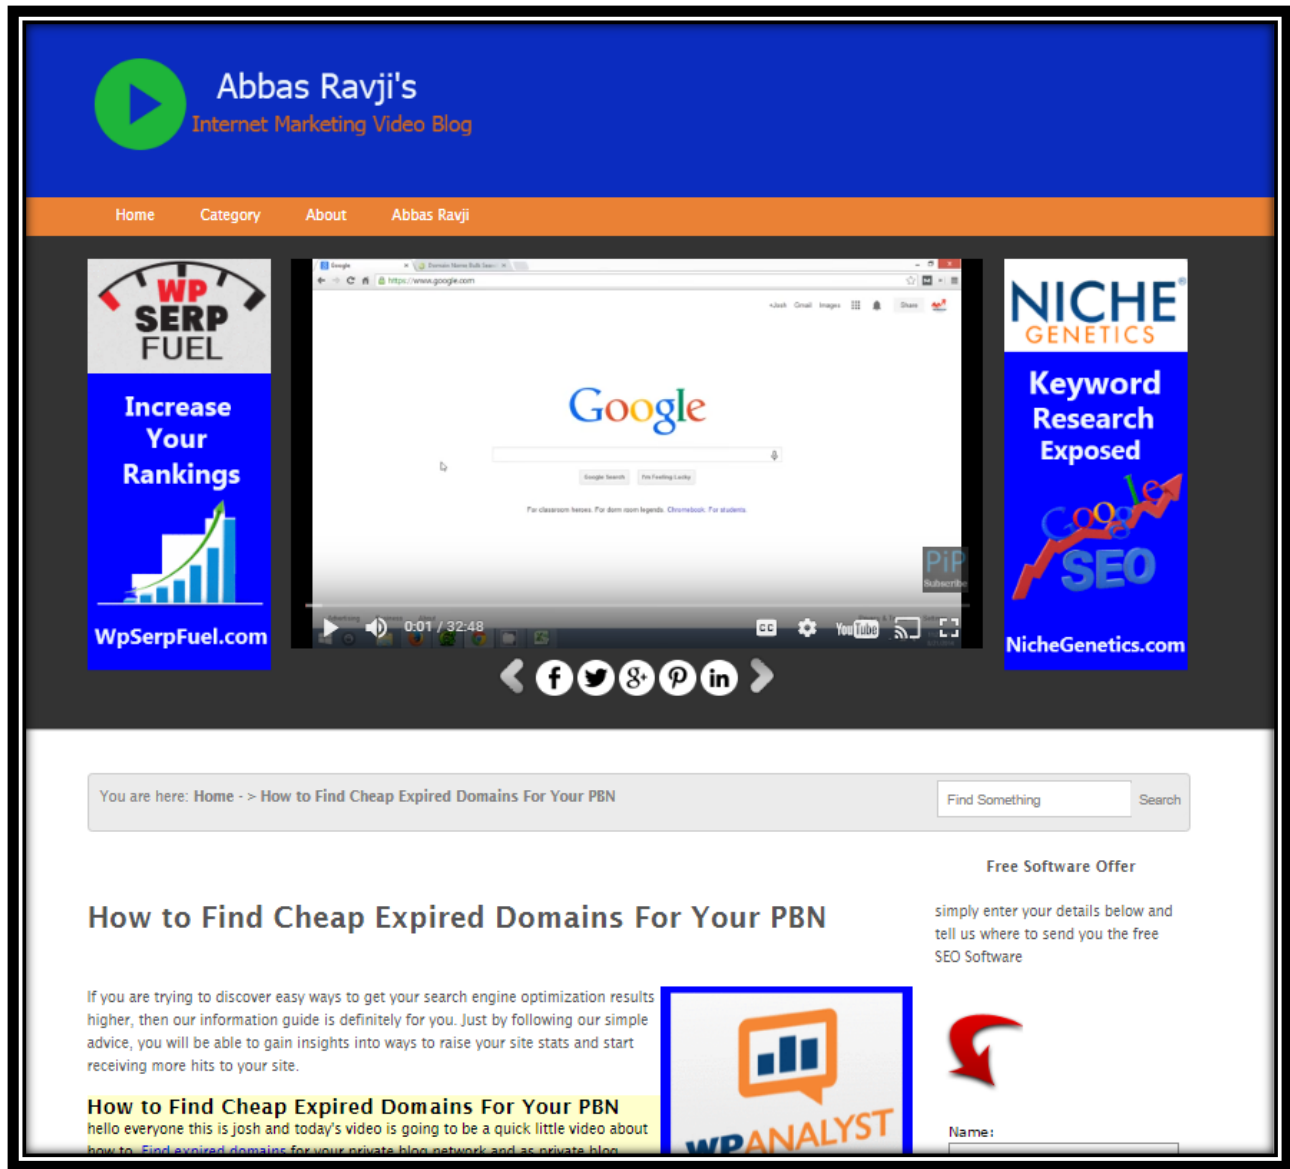

Here's a sample of how a video blog home page can look

The colours, logos and theme are customizable so to match any site

The video blog uses an optimized silo structure for maximizing rankings, and all posts inside of the video blog use Schema Mark-up. Videos can be played in a stylish lightbox popup or individual video posts can be visited directly.

Here's how a Video Post looks like

Each post showcases a video towards the top with social sharing icons under them. Videos will only link out to related videos within the same category so to keep the silo structure intact. Relevant Content & internal links are added below videos.

Each post provides optional hot spot banner placements which are perfect for promoting your main site or other services (videos, iframes, images, gifs, opt in codes etc can be added).
Social Links, Traffic, Authority & Exposure

Each video post gets auto syndicated to authority social media sites.

This provides a further related document freshness boost, gets social links and starts to send social traffic.
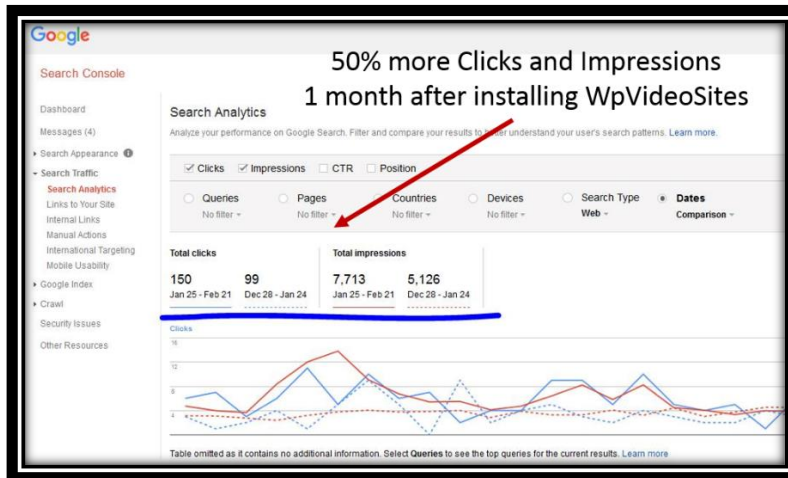

It also helps in ranking the actual video posts themselves.

# Here's just a few results achieved using WpVideoSites

Fully optimized Video and RSS Sitemap Feeds using Silo structure

WpVideoSites creates fully optimized Video and RSS feeds.

It creates

- **General Feeds: -** This Feed Contains All Videos in Your Site
- **Category specific feeds: -** This feed shows all videos inside a particular category
- **Post Feeds: -** This Feed shows only videos that link back to a certain WordPress Post.

These feeds are fully styled using images and are great for using when wanting to control the type of content you want to syndicate AND for Super-Fast Indexing.
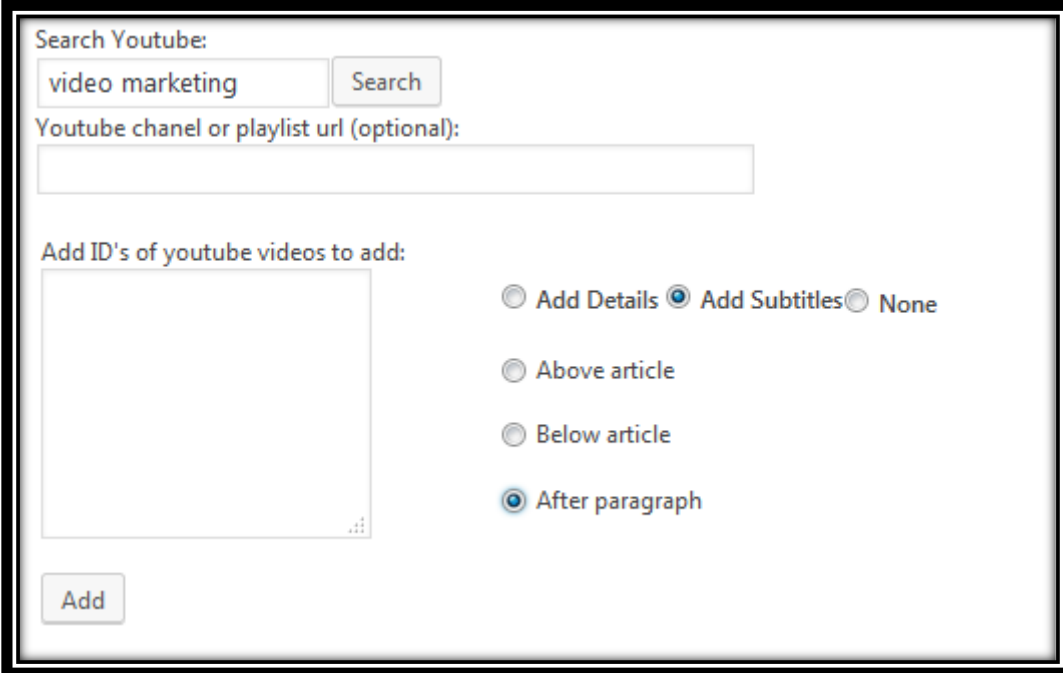

Auto Content Generation Using Video Transcripts

WpVideoSites automatically generates content in <u>ANY language</u> by converting what's being said in the actual video into written text.

It then places this text under the videos as content. This makes sure you have 100% relevant and related content on your video posts.

It's also possible to add content of your own (which can be spun if you wish) along with the video transcript, or you can get further content from other integrated services such as Article Builder which is totally optional.
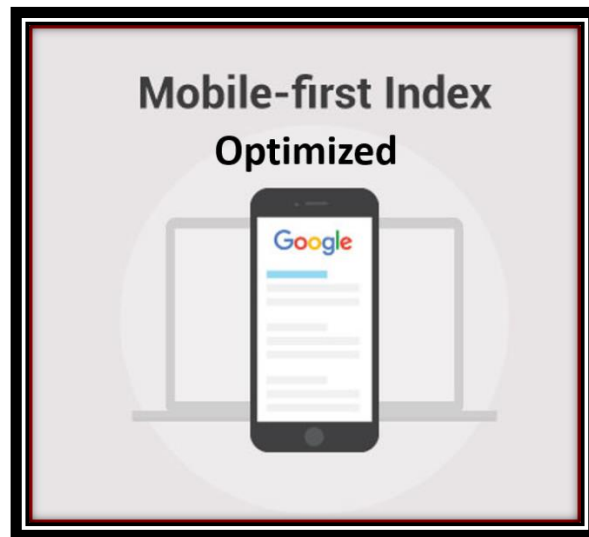

Some of us like to add our own content mixed with the transcript while others don't, some like to edit the transcript while others don't. Whatever the case, WpVideoSites allows you to work with it in whatever way you prefer.

WpVideoSites has been tested for over 4 months

Here are some reviews

WpVideoSites has taken our 6 page minisite and turned it into a 174 page monster that is niche specific and on target.

The results obtained have been nothing short of 'amazing' ... More Pages, More Rankings, More Traffic and most importantly More Sales. I would strongly advise anyone to purchase WpVideoSites and install it on as many sites as possible, it only makes things better in all departments!

David Edwards, webmaster & Marketer
zenprocbd.com

WPVideo Sites has dramatically improved our company's website ranking in less than 10 days and it shot up the rankings from position 94 to position 9 on virtual autopilot.

We were amazed at the results and are now enjoying the benefits of increased traffic to our website and a notable increase in inquiries for our services.

This system is totally newbie friendly and so easy to use that litterally anyone could set one of these great looking sites up in no time at all. Simply load up a YouTube Playlist of videos, set it to post daily, all on complete auto-pilot, and just watch the rankings go up and up.

This is the MUST HAVE SEO PRODUCT for 2017

Here are some more reviews

Another great plugin from Abbas and crew.

This plugin makes it quick and easy to set up a video section on your site to give it some serious power. It's easy to set up and integrate on your sites and like all of Abbas stuff, the support is awesome. I have used it on both brand new sites as well as juicing up some of my existing sites. I can't say enough good things about this plugin. Pick it up and get ranking!

So glad I found this and will be using it on all my sites. Good work fellas!

Scott Allen, CEO
KansasCitySEOGroup.com

As one of beta testers of WpVideoSites, I've able to put this plugin through its paces.

This plugin does a great job of increasing the traffic to your blog and increasing the relevancy of your posts by creating good on page relevancy for your posts. The plugin is also good at increasing the relevancy of your own videos if you use these within the backlink pages.

All in all a solid utility plugin to increase your website traffic and be able to easily display relevant content on your blog.
